TECHNICAL PROJECTS

Be@rbrick&Mortar - Github | Demo
Ecommerce app where users can view and buy Be@rbrick art figures
- Users can create accounts/use logins
- Users can search for specific figures by name, and add/delete items from cart
- Mock payment added
- Implemented React.js frontend, Ruby on Rails backend, PostgreSQL, react-bootstrap and custom CSS

Game Invader - Github | Demo
Game review app which allows users to view and provide feedback/reviews on games which are in our database
- Users can create/update/delete accounts, and create/delete reviews.
- Utilized Ruby and Sinatra to help control backend and server side frameworks
- Used React for front end/client side rendering and interaction
- Implemented full CRUD capability for user accounts/password info
- Added React-Bootstrap and custom CSS for style and overall look of the app

Movie App - Github | Demo
Movie review App which allows users to see a list of movies from our server, to search and favorite movies.
- Users are able to view and add/create new movie details to our database
- Users can add movies to a separate favorites list they would like.
- Utilized Json Server for back end framework
- Used React for front end/client side rendering and interaction
- Added React-Bootstrap and custom CSS for style and overall look of the app
